

Europe Test Review:

PHYSICAL GEOGRAPHY *(see the lecture notes and Chapter 12.1 for much of this information in this review section)*

Why is Europe known as the peninsula of peninsulas?

Know:

- The mountain chains and key facts, and how they've historically hindered movement.
- Five main peninsulas and where they are located.
- Two main rivers and how they've historically helped with movement.

How did the Northern European Plain historically help with the movement of people, goods, and ideas?

How have Europe's natural resources helped it to become a wealthy continent?

What is the purpose of a sea wall? How does it affect the environment?

SUBREGIONS

There are various questions related to the Sub-Regions of Europe.

- Know basic details of each subregion's culture-types, economies, and problems.
 - Deforestation – Where is it happening? Why is it happening?
-

INDUSTRIAL REVOLUTION

How did the Industrial Revolution affect the movement of people, goods, and ideas?

- Urbanization -- affects
- Speed of transport – affects
- Imperialism – affects

What were some positive outcomes of the Industrial Revolution?

What were some negative outcomes of the Industrial Revolution?

How is acid rain created? Where are the most heavily affected areas? Why are these areas the most affected? *(see p. 285 in your textbook)*
